Control of Pathogens and Vector Attraction in Sewage Sludge

### **Environmental Regulations and Technology**

## Control of Pathogens and Vector Attraction in Sewage Sludge

(Including Domestic Septage)
Under 40 CFR Part 503

This guidance was prepared by

U.S. Environmental Protection Agency
Office of Research and Development
National Risk Management Research Laboratory
Center for Environmental Research Information
Cincinnati, OH 45268

#### **Notice**

This report has been reviewed by the U.S. Environmental Protection Agency and approved for publication. The process alternatives, trade names, or commercial products are only examples and are not endorsed or recommended by the U.S. Environmental Protection Agency. Other alternatives may exist or may be developed.

#### Foreword

The U.S. Environmental Protection Agency (EPA) is charged by Congress with protecting the Nation's land, air, and water resources. Under a mandate of national environmental laws, the Agency strives to formulate and implement actions leading to a compatible balance between human activities and the ability of natural systems to support and nurture life. To meet this mandate, EPA's research program is providing data and technical support for solving environmental problems today and building a science knowledge base necessary to manage our ecological resources wisely, understand how pollutants affect our health, and prevent or reduce environmental risks in the future.

The National Risk Management Research Laboratory (NRMRL) is the Agency's center for investigation of technological and management approaches for preventing and reducing risks from pollution that threaten human health and the environment. The focus of the Laboratory's research program is on methods and their cost-effectiveness for prevention and control of pollution to air, land, water, and subsurface resources; protection of water quality in public water systems; remediation of contaminated sites, sediments and ground water; prevention and control of indoor air pollution; and restoration of ecosystems. NRMRL collaborates with both public and private sector partners to foster technologies that reduce the cost of compliance and to anticipate emerging problems. NRMRL's research provides solutions to environmental problems by: developing and promoting technologies that protect and improve the environment; advancing scientific and engineering information to support regulatory and policy decisions; and providing the technical support and information transfer to ensure implementation of environmental regulations and strategies at the national, state, and community levels.

This publication has been produced as part of the Laboratory's strategic long-term research plan. It is published and made available by EPA's Office of Research and Development to assist the user community and to link researchers with their clients.

Hugh W. McKinnon, Director National Risk Management Research Laboratory

#### Contents

Chapter 1 Introduction	
1.1 What is Sewage Sludge?	1
1.2 U.S. Regulation of Treated Sewage Sludge (Biosolids)	4
1.3 Implementation Guidance	
1.4 Definitions	5
1.5 Pathogen Equivalency Committee	6
1.6 What is in this Document?	
Chapter 2 Sewage Sludge Pathogens	8
2.1 What are Pathogens?	
2.2 Pathogens in Sewage Sludge	
2.3 General Information on Pathogens	
2.4 Protecting Public Health -The Part 503	
2.5 Frequently Asked Questions	
2.0 1 10440118) 7 10104 (400010110 1111111111111111111111	
Chapter 3 Overview of Part 503 Subpart D Requirements, Their Applicability, and	
Related Requirements	20
3.1 Introduction	
3.2 Pathogen Reduction Requirements	
3.3 Vector Attraction Reduction (VAR) Requirements [503.33]	
3.4 Applicability of the Requirements [503.15 and 503.25]	
3.5 Frequency of Monitoring	
3.6 Sampling Stockpiled or Remixed Biosolids	
3.7 Recordkeeping Requirements [503.17 and 503.27]	
3.8 Reporting Requirements for Sewage Sludge [503.18 and 503.28]	
3.9 Permits and Direct Enforceability [503.3]	
3.9 Fermits and Direct Emorceability [503.5]	20
Chapter 4 Class A Pathogen Requirements	26
4.1 Introduction	
4.2 Vector Attraction Reduction to Occur With or After Class A Pathogen	20
Reduction [503.32(a)(2)]	26
4.3 Monitoring of Fecal Coliform or Salmonella sp. to Detect Growth of Bacteria	
[503.32(a)(3)-(8)]	
4.4 Alternative 1: Thermally Treated Sewage Sludge [503.32(a)(3)]	
4.5 Alternative 2: Sewage Sludge Treated in a High pH-High Temperature Proce	
Treatment) [503.32(a)(4)]

#### Acknowledgments

This guidance document was produced by the U.S. Environmental Protection Agency (EPA) Pathogen Equivalency Committee (PEC) whose members include Robert Bastian, Bob Brobst, John Cicmanec, G. Shay Fout, Hugh McKinnon, Mark Meckes, Frank Schaefer, Stephen Schaub, and James E. (Jim) Smith, Jr. The contributions of Jim Smith, who was instrumental in the administration, organization, and direction of this project; and of Bob Brobst, Mark Meckes, and Robert Bastian along with Greg B. Kester of the State of Wisconsin, who provided significant comments and guidance, are especially appreciated. Eliot Epstein and Nerissa Wu of E&A Environmental Consultants, Inc. in Canton, Massachusetts, prepared the document with information and comments from the PEC and from EPA and State sludge coordinators and private contributors including Joseph B. Farrell, a consultant, and Robert Reimers of Tulane University. The assistance of reviewers including John Colletti, Madolyn Dominy, Lauren Fondahl, Alia Roufaeal, and John Walker of EPA; Jeffrey G. Faust of Bio Gro; Joe Pearce of the State of North Carolina; Bob Southworth, a consultant; and all other contributors, too numerous to name, is very much appreciated.

The following individuals assisted by updating guidance for analytical procedures: Appendix F: Sample Preparation for Fecal Coliform Tests and *Salmonella* sp. Analysis - Mark Meckes; Appendix H: Method for the Recovery and Assay of Enteroviruses from Sewage Sludge - Shay Fout; Appendix I: Analytical Method for Viable Helminth Ova - Frank Schaefer; Appendix J: Composting: Basic Concepts Related to Pathogens and Vector Attraction - Eliot Epstein of E&A Environmental Consultants and Bob Brobst of EPA's Region 8 Office in Denver, CO.
